

IT Lifecycle Management: The Role of Leasing & Financing

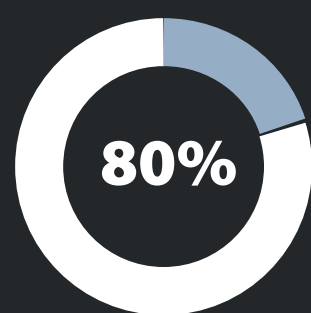

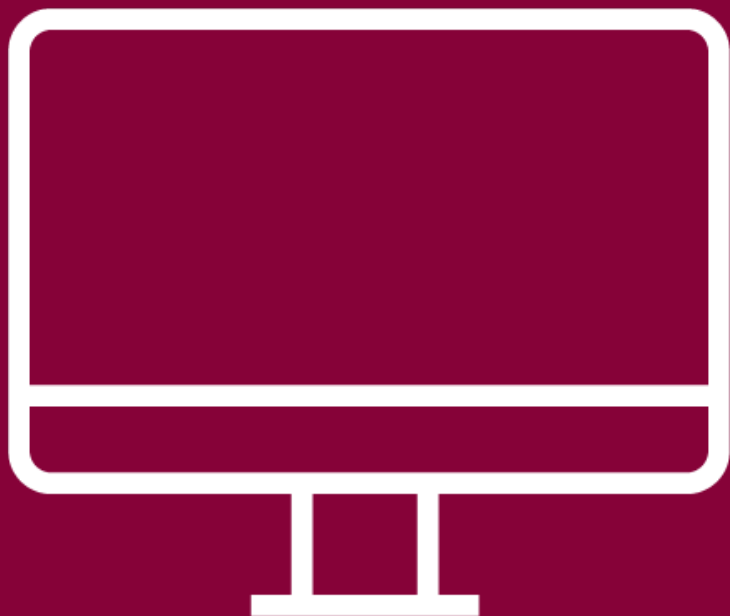

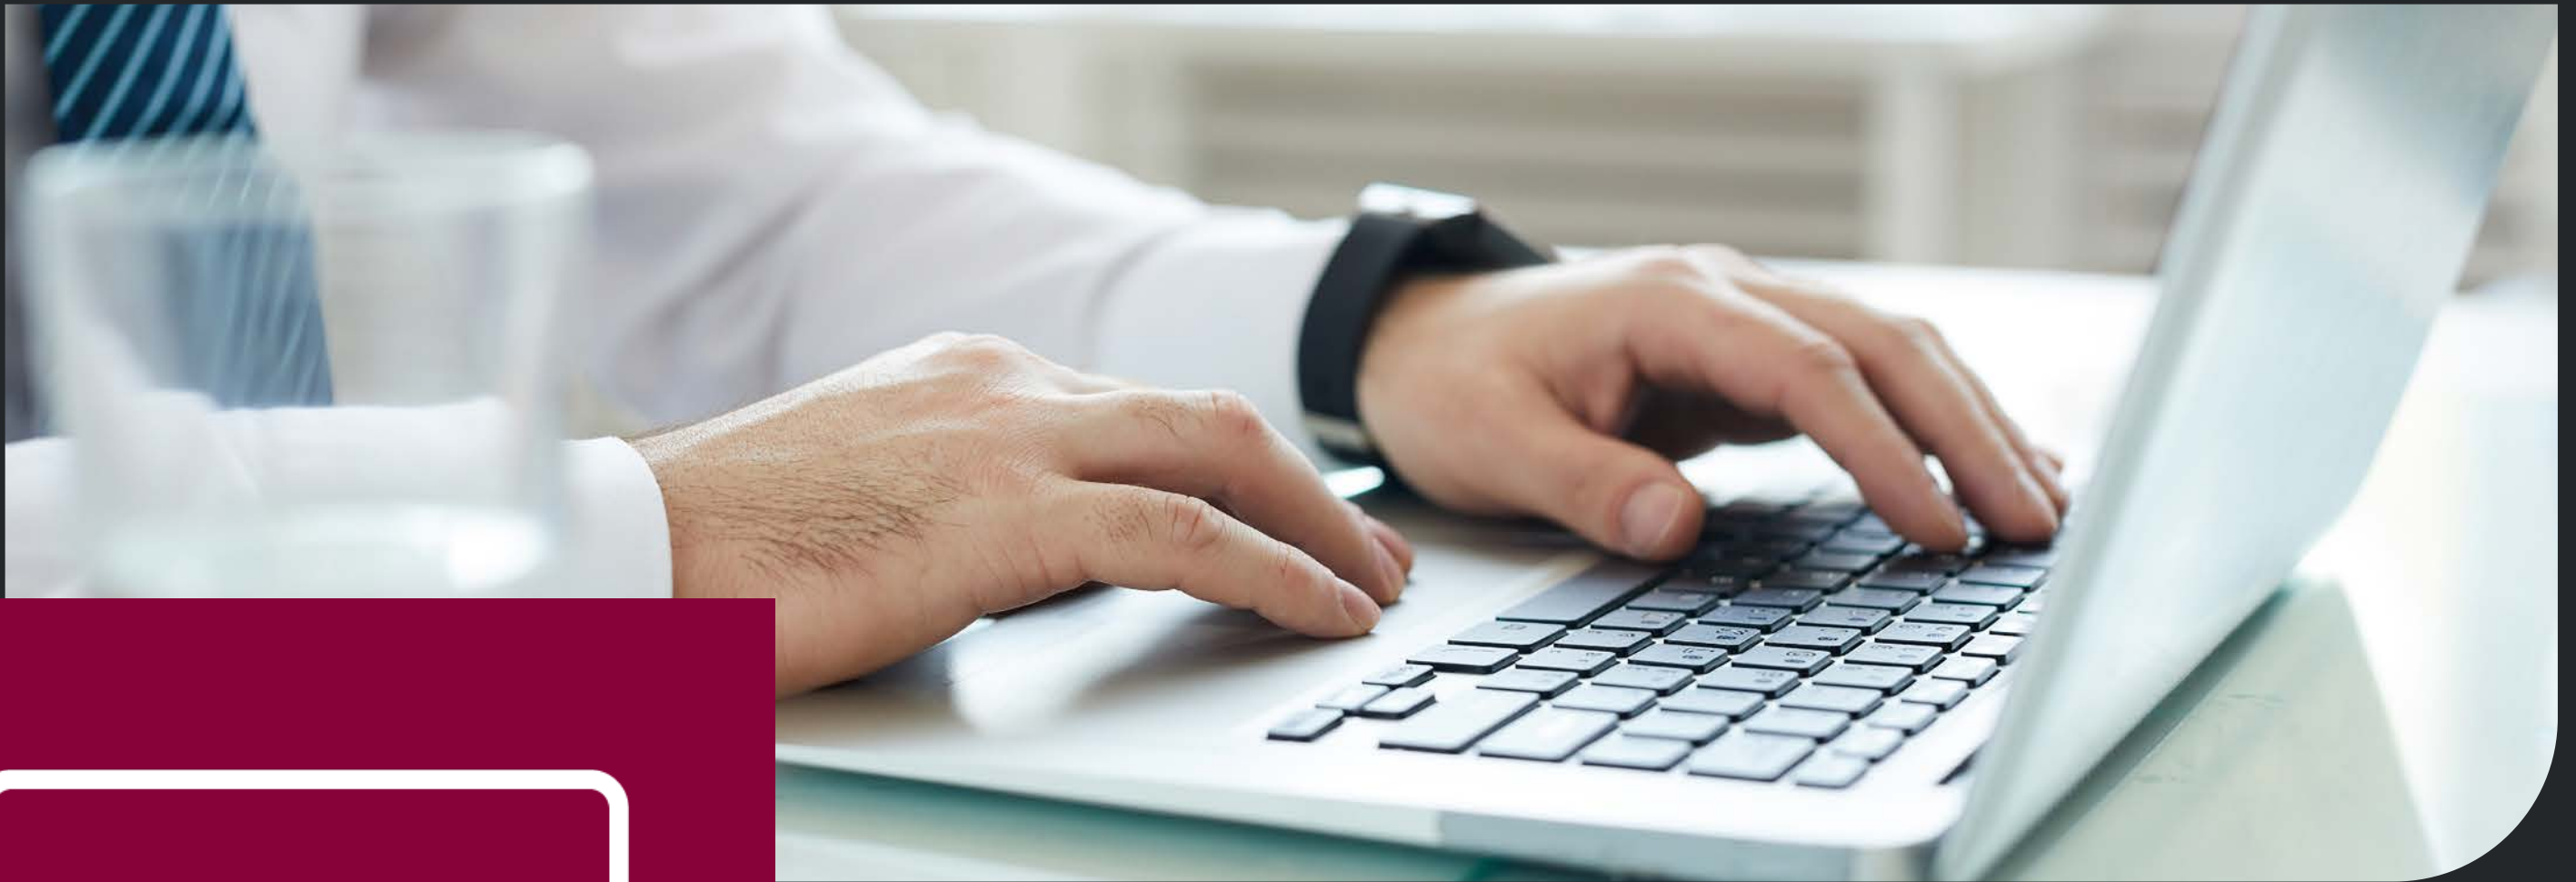

Organizations around the world invest in technology to support their business and transform customer experiences. Depending on several factors, IT lifecycles can be complex. Read on to learn how leasing and financing can go beyond preserving capital and help you streamline processes from procurement to disposal.

CSI LEASING

Procurement & Funding

Procurement and purchasing strategies in many organizations involve a lot of strategy and administrative workloads. Beyond securing funding, leasing with an independent lessor can help consolidate vendors into a single account reducing administrative burdens. For example, some customers choose to lean on CSI's team to facilitate purchasing on their behalf.

Nearly 8 in 10 businesses use at least one form of financing (excluding credit cards) to acquire equipment*

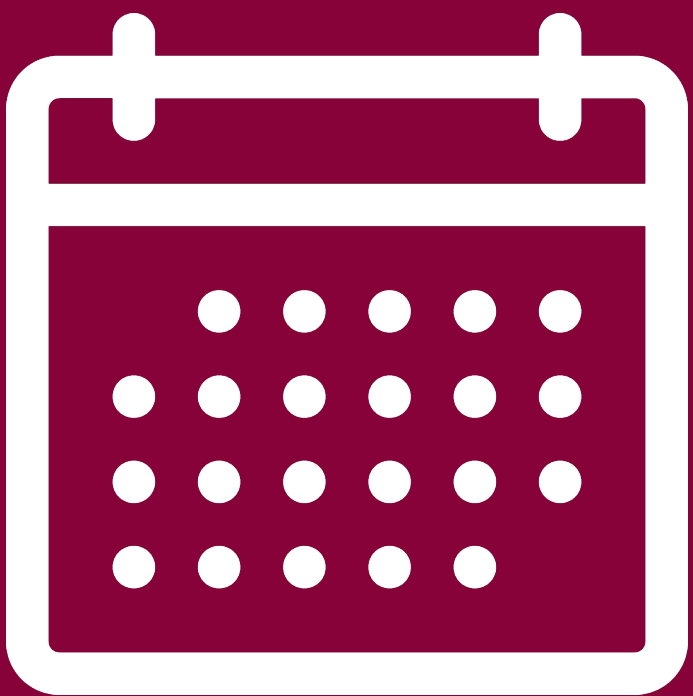

Installation & Deployment

Before technology is sent to the end-user several steps take place such as asset tagging and imaging. While these services are being performed by your preferred vendors, CSI can take care of the administrative work and reconcile invoices. Assets can be logged into CSI's online portal, MyCSI.

Refresh & Upgrades

The physical reliability of devices continues to increase but the question relies in usefulness and efficiency. Leasing can help get your organization on a streamlined refresh plan to avoid obsolescence and gaps in security. Flexible terms at CSI have allowed customers to return a percentage of their acquired hardware to replenish devices that make sense for them.

Computers that are **older than four years** are breached **3x** more often than computers that are under three years old*

Remarketing & Disposal

Keeping out-of-use IT locked in storage is not only unsecure but it also leaves opportunities on the table. CSI's subsidiary EPC is an experienced ITAD provider that can unlock the value of owned, retired IT to increase your budget. EPC is certified and performs data wipes according NIST standards.

Need Help?

Leasing with CSI helps businesses simplify procurement, digital transformation, data security and reach their sustainability goals.
