Simplifying IT Management with Integrations

Keeping your organization's IT under control is easier when applications speak to each other.

CSI LEASING

SaaS Sprawl: What is it?

SaaS sprawl is when an organization has many software applications in their tech stack. It often balloons when employees or departments expense their own applications. It can cause severe **visibility** and **security** problems in your organization.

Application Trends

Large companies (2,000+ employees) deploy more than

187

Apps on average

Representing a 24% increase since 2016.*

Okta Businesses at Work Report 2022

Risks to Your IT Management Plan

Do you have multiple platforms tracking your assets?
Your organization could be facing these challenges.

Risks	Outcomes
Lack of visibility	Lost equipment, keeping equipment well past its lifecycle, late lease returns
Increased costs	Undetected devices and licenses, increased maintenance on aging devices
Opportunity costs	Missed opportunity for IT asset remarketing and recovery

How Integrations Help

By integrating your IT asset management systems, you can benefit from:

Consistent data: Linking your systems together gives you a complete picture of your IT platform

**Process efficiency:** Automated reporting and entry reduces need for manual tasks

Cost control: Easily identify device gaps, wasted use and opportunities for preventative maintenance.

Unify with MyCSI

CSI's online Asset Information Tool, MyCSI, is equipped with options to keep your data in sync.

CSI's ServiceNow integration app was designed to help organizations sync data with limited coding required.

Communicate with MyCSI giving your developers ultimate flexibility utilizing our two-way REST API.
